FOR IMMEDIATE RELEASE

Renewable Nutrients Announces the Producers of the Television Show “World’s Greatest!...” have Selected the Company to Feature on an Upcoming Episode

Pinehurst, North Carolina, USA – December 7, 2015 – Renewable Nutrients announced today that How2Media, the producers of the television show “World’s Greatest!...”, has selected Renewable Nutrients to be a part of the popular television series.

“The world must explore new and sustainable sources of phosphorus to meet accelerating demand; peak phosphate production will happen around 2030. Renewable Nutrients has a patented technology called Quick Wash™, which extracts **95%** or more of the phosphorus found in human and animal waste. The system is installed at waste water treatment plants and on farms where municipal and animal agriculture operations are looking to capitalize on nutrient recovery. We think the Renewable Nutrients story will be meaningful as well as educational to our viewers”, said Gordon Freeman, Executive Producer of the show.

As part of the show, How2Media sent a film crew to spend time at a wastewater treatment facility in North Carolina where the Quick Wash system was being trialed. Their on-location objective was to uncover the story behind the story with this great and growing company, and to show “World’s Greatest!...” viewers why Renewable Nutrients was selected as the best in their category, and therefore featured on the show.

“We are thrilled that “World’s Greatest!...” has selected our company to feature in one of its episodes”, said Jeff Dawson, Renewable Nutrients’ President and Chief Executive Officer. “Our Quick Wash technology is currently the only economical and scalable solution available in the marketplace for wastewater treatment facilities and animal growing operations to extract and recover most of the phosphorus in their respective waste streams. We think Quick Wash ushers in a new era in nutrient management, helping not only to reduce the incidence of phosphorus pollution, but provide a means for municipalities and farms to sustainably recover and re-use this valuable nutrient”, continued Dawson.

Viewers can watch the “World’s Greatest!...” episode featuring Renewable Nutrients live on Dish Network or DirecTV on December 7 or December 14:

- DirecTV Channel 305
- Dish Network on channel 250

Alternatively, viewers can click [here](#) to view the Renewable Nutrients' video segment or visit the "World's Greatest!..." website to access the television schedule (http://worldsgreatesttv.com/tv_schedule) and see upcoming episode information for specific channels and network information.

About Renewable Nutrients, LLC (www.renewablenutrients.com)

Renewable Nutrients is a private, North Carolina-based company that turns waste into sustainable and profitable resources. Through its exclusive license of the patented Quick Wash™ process, Renewable Nutrients allows waste treatment plants and farms to extract and recover phosphorus from human biosolids and manure solids. The remaining biosolids or manure solids, which contain crop-friendly ratios of nitrogen-to-phosphorus, can be land-applied, thus lessening the amount of waste trucked to disposal sites, and reducing or even eliminating the incidence of nutrient pollution from soil runoff. In addition, municipalities and farms can sell the recovered phosphorus on the open market, and engage in the trading or marketing of nutrient credits.

About "World's Greatest!..." and How2Media

"World's Greatest!..." is a thirty minute show dedicated to highlighting the world's greatest companies, products, places, and people. Each show is a fast paced tour around the world featuring behind the scenes footage, informative interviews, and exciting visuals.

How2Media is a 21st Century television production company. Their award winning programming can be seen on national cable channels and local network affiliates across the country. For more information on How2Media and their show lineup, please visit www.How2Media.tv.
